

EML4-ALK Fusion/Translocation FISH Probe Kit

Introduction

The EML4-ALK Fusion/Translocation FISH Probe Kit is designed to detect rearrangements involving the human *EML4* and *ALK* genes, located on chromosome bands 2p21 and 2p23.2, respectively. Fusion between the two genes (*EML4* – also known as *C2orf2*, *ELP120*, *EMAP-4*, *EMAPL4* or *ROPP120* – and *ALK* – also known as *CD246* or *NBLST3*) is a common event in a subset of non-small cell lung cancer (NSCLC) cases.

Intended Use

To detect rearrangements involving the human *EML4* and *ALK* genes located on chromosome bands 2p21 and 2p23.2, respectively.

Probe Design

LSP EML4 FISH Probe covers a chromosomal region which includes the entire *EML4* gene. LSP ALK 3' FISH Probe covers the 3' end of the *ALK* gene and the neighboring downstream region. The probe set is optimized to reveal translocations between the two genes.
