

EGFR/CCP7 FISH Probe Kit

Introduction

The EGFR/CCP7 FISH Probe Kit is designed to detect the human *EGFR* gene located on chromosome band 7p11.2, along with the number of chromosome 7 copies per cell. Abnormal expression of the *EGFR* gene – also known as *TIS8*, *AT225*, *GOS30*, *NGF1-A*, *ZNF225*, *KROX-24* or *ZIF-268* – has been observed in leukemia, fibrosarcoma, lung, breast, brain, liver, skin, prostate and other tumor types.

Intended Use
To measure the copy number of the human <i>EGFR</i> gene located on chromosome band 7p11.2.

LSP EGFR FISH Probe CCP7 FISH Probe	CytoOrange CytoGreen

Probe Design

LSP EGFR FISH Probe covers a chromosomal region which includes the entire *EGFR* gene. CCP7 FISH Probe, derived from chromosome 7-specific alpha satellite DNA, is designed to serve as a control to determine the number of chromosome 7 copies per cell.

Not to Scale
