

# MET/CCP7 FISH Probe Kit

## Introduction

The MET/CCP7 FISH Probe Kit is designed to detect the human *MET* gene located on chromosome band 7q31.2, along with the number of chromosome 7 copies per cell. Rearrangements and abnormal expression of the *MET* gene – also known as *HGFR*, *AUTS9*, *RCCP2* or *c-Met* – have been observed in hereditary and sporadic kidney cancers and other tumor types.

### Intended Use

To measure the copy number of the human *MET* gene located on chromosome band 7q31.2.

Cont.	Color
-------	-------

LSP MET FISH Probe CCP7 FISH Probe	CytoOrange CytoGreen
---------------------------------------	-------------------------

## Probe Design

LSP MET FISH Probe covers a chromosomal region which includes the entire *MET* gene. CCP7 FISH Probe, derived from chromosome 7-specific alpha satellite DNA, is designed to serve as a control to determine the number of chromosome 7 copies per cell.

Cat. No.	Volume
