

MYB/CCP6 FISH Probe Kit

Introduction

The MYB/CCP6 FISH Probe Kit is designed to detect the human *MYB* gene located on chromosome band 6q23.3, along with the number of chromosome 6 copies per cell. Rearrangements and abnormal expression of the *MYB* gene – also known as *efg*, *Cmyb*, *c-myb* or *c-myb_CDS* – have been observed in acute and lymphoid leukemias, colorectal, breast and other solid tumors and malignancies.

Intended Use
To measure the copy number of the human <i>MYB</i> gene located on chromosome band 6q23.2.

Probe Design

LSP MYB FISH Probe covers a chromosomal region which includes the entire *MYB* gene. CCP6 FISH Probe, derived from chromosome 6-specific alpha satellite DNA, is designed to serve as a control to determine the number of chromosome 6 copies per cell.
