

SDHB/CCP1 FISH Probe Kit

Introduction

The SDHB/CCP1 FISH Probe Kit is designed to detect the human *SDHB* gene located on chromosome band 1p36.13, along with the number of chromosome 1 copies per cell. Abnormal expression of the *SDHB* gene – also known as *IP*, *SDH*, *CWS2*, *PGL4*, *SDH1*, *SDH2* or *SDHIP* – has been observed in paragangliomas, pheochromocytoma and other conditions.

Intended Use
To measure the copy number of the human <i>SDHB</i> gene located on chromosome band 1p36.13.

Probe Design

LSP SDHB FISH Probe covers a chromosomal region which includes the entire *SDHB* gene. CCP1 FISH Probe, derived from chromosome 1-specific alpha satellite DNA, is designed to serve as a control to determine the number of chromosome 1 copies per cell.

Not to Scale
