

FLCN/CCP17 FISH Probe Kit

Introduction

The FLCN/CCP17 FISH Probe Kit is designed to detect the human *FLCN* gene located on chromosome band 17p11.2, along with the number of chromosome 17 copies per cell. Abnormal expression of the *FLCN* gene – also known as *BHD* or *FLCL* – has been found in sporadic kidney carcinoma and other tumor types and conditions.

Intended Use
To measure the copy number of the human <i>FLCN</i> gene located on chromosome band 17p11.2.

Probe Design

LSP FLCN FISH Probe covers a chromosomal region which includes the entire *FLCN* gene. CCP17 FISH Probe, derived from chromosome 17-specific alpha satellite DNA, is designed to serve as a control to determine the number of chromosome 17 copies per cell.
