

ABL2/CCP1 FISH Probe Kit

Introduction

The ABL2/CCP1 FISH Probe Kit is designed to detect the human *ABL2* gene located on chromosome band 1q25.2, along with the number of chromosome 1 copies per cell. Abnormal expression or rearrangements of the *ABL2* gene – also known as *ARG* or *ABLL* - has been observed in acute non-lymphocytic leukemia and numerous other cancer types.

Intended Use

To measure the copy number of the human *ABL2* gene located on chromosome band 1q25.2.

Probe Design

LSP ABL2 FISH Probe covers a chromosomal region which includes the entire *ABL2* gene. CCP1 FISH Probe, derived from chromosome 1-specific alpha satellite DNA, is designed to serve as a control to determine the number of chromosome 1 copies per cell.
