

MYB-NFIB Fusion/Translocation FISH Probe Kit

Introduction

The MYB-NFIB Fusion/Translocation FISH Probe Kit is designed to detect rearrangements involving the human *MYB* and *NFIB* genes, located on chromosome bands 6q23.3 and 9p23, respectively. Rearrangements between the two genes have been observed in adenoid cystic carcinoma and other salivary gland tumors.

Intended Use
To detect rearrangements involving the human <i>MYB</i> and <i>NFIB</i> genes located on chromosome bands 6q23.3 and 9p23, respectively.

Probe Design

LSP MYB 5' FISH Probe covers the entire *MYB* gene along with upstream (5') and some downstream (3') genomic sequences. LSP NFIB 3' FISH Probe covers the 3' (end) portion of the *NFIB* gene along with some adjacent genomic sequences. The probe set is optimized to reveal translocations between the two genes.

Not to Scale

Cat. No.	Volume
