

FGFR4 Break Apart FISH Probe Kit

Introduction

The FGFR4 Break Apart FISH Probe Kit is designed to detect rearrangements in the human *FGFR4* gene located on chromosome band 5q35.2. In addition to revealing breaks, which can lead to translocation of parts of the gene, inversion, or its fusion to other genes, the probe set can also be used to identify other *FGFR4* aberrations such as deletions or amplifications. Rearrangements and abnormal expression of the *FGFR4* gene – also known as *CD334*, *JTK2* or *TKF* – have been observed in various cancer types such as prostate cancer, melanoma, hepatocellular carcinoma, lung cancer, breast cancer, gastric cancer, colorectal cancer, pancreatic cancer and others.

Intended Use
To detect rearrangements in the human <i>FGFR4</i> gene located on chromosome band 5q35.2.

Probe Design

LSP FGFR4 5' FISH Probe covers sequences adjacent to the 5' (start) portion of the *FGFR4* gene. LSP FGFR4 3' FISH Probe covers some sequences downstream (3' end) of the gene. The two probes are flanking sequences across the *FGFR4* gene in which variable breakpoints have been observed.

Not to Scale

Cat. No.	Volume
