

CARS Break Apart FISH Probe Kit

Introduction

The CARS Break Apart FISH Probe Kit is designed to detect rearrangements in the human *CARS* gene located on chromosome band 11p15.4. In addition to revealing breaks, which can lead to translocation of parts of the gene, inversion, or its fusion to other genes, the probe set can also be used to identify other *CARS* aberrations such as deletions or amplifications. Rearrangements and abnormal expression of the *CARS* gene – also known as *CARS1*, *CYSRS* or *MGC:11246* – have been observed in inflammatory myofibroblastic tumors (IMT) and several other tumor types.

Intended Use

To detect rearrangements in the human *CARS* gene located on chromosome band 11p15.4.

Probe Design

Not to Scale

LSP CARS 5' FISH Probe covers the 5' (start) portion of the *CARS* gene and some adjacent genomic sequences. LSP CARS 3' FISH Probe covers the 3' (end) part as well as sequences downstream of the gene. The two probes are flanking sequences across the *CARS* gene in which various breakpoints have been observed.

Cat. No.

Volume

CT-PAC046-10-OG

10 Tests (100 µL)

Signal Pattern Interpretation

Normal Pattern

2OG*

Abnormal Pattern

Other Patterns

*Overlapping orange and green signals can appear as yellow.
