AMNIODISH

REF EKAM240 Q.ty 240 pieces

Amniodish is a support for the *in situ* culture of adherent cells, and in particular amniocytes and *chorionic villi*. Amniodish is a ready to use 35 mm Petri dish including round coverslip.

The use of the internal slide allows to perform directly chromosomal banding or molecular investigation (i.e. FISH analysis) avoiding trypsinization step.

Features

-  Product description: Petri dish with a round coverslip for culture and analysis of amniocytes and chorionic villi.
-  Packaging: Each box contains 40 trays, 6 amniodish/tray, for a total of 240 Amniodish, ready to use and Gamma Irradiated.
-  Coverslip dimensions: 32 mm diameter, 0.13-0.16 mm thickness..
-  Shelf Life and Storage: 2 years at room temperature
